To Whom It May Concern:

We write this letter to share our experience with Total Energy Concepts, Inc. Power Protection & Energy Optimization System. We installed the system in August of 2006. It has performed as we were told, we are nearly achieving the 15% energy savings promised by Total Energy Concepts.

We are evaluating the cost savings in maintenance on our lighting systems both inside and outside the building. We feel the promised protection and reduction in maintenance after installing the system will have a tremendous effect on our facility.

Total Energy Concepts commitment to 100% total customer service and satisfaction rivals that of our own dealership, customer satisfaction is what every business needs to survive in today's marketplace and TEC, Inc. has scored 100% in that category. Today's escalating energy costs and the protection supplied by this system was the deciding factor for us to install the Total Energy Concepts Power Protection & Energy Optimization System. We highly recommend that each and every business owner consider the system to reduce your energy consumption and protect your facility.

Sincerely,

Alan Judd
